

## **Atlanta Plastic Surgeon Offers Profound RF Microneedling for Non-Surgical Skin Tightening**

*Double board-certified plastic surgeon Dr. Benjamin Stong of Kalos Plastic Surgery, LLC in Atlanta, Georgia is now offering Profound RF Microneedling, a revolutionary skin tightening treatment that relies on radiofrequency energy to lift and tighten facial skin without surgery or fillers. Profound is an in-office, no downtime treatment that carries a remarkable success rate.*

ATLANTA ([PRWEB](#)) January 30, 2018 -- Dr. Benjamin Stong of Kalos Facial Plastic Surgery, LLC in Atlanta, Georgia proudly offers a full menu of both surgical and non-surgical procedures for the face and neck. Dr. Stong is a nationally recognized double board certified facial plastic surgeon who recognizes the importance of providing the most proven cosmetic procedures that are safe, look natural and require minimal downtime for patients who do not wish to undergo extensive plastic surgery.

While the Atlanta-based office offers numerous surgical procedures and filler treatments to rejuvenate the face, Dr. Stong is proud to offer a breakthrough treatment that can tighten and lift the skin without fillers, toxins or surgical downtime. Dr. Stong now offers the [Profound RF Microneedling](#) technology that uses temperature-controlled radiofrequency energy to create the three main building blocks of youthful skin. During a single in-office treatment session, this innovative device stimulates the body's natural production of collagen, elastin and hyaluronic acid, which are often lost during the aging process. This makes it an ideal solution for patients who want a more natural approach to facial rejuvenation.

Profound RF Microneedling can be used to improve both skin texture and quality. The breakthrough technology has been shown to reduce wrinkles, treat acne scars and add volume and resiliency to the jawline, neck, nasolabial folds and cheeks. Patients can utilize Profound RF Microneedling for a [non-surgical facelift](#), non-surgical cheek lift or [non-surgical neck lift](#). Dr. Stong reports a 100% patient response rate and no downtime with this cutting-edge skin tightening treatment.

"I am thrilled to offer Profound RF Microneedling, as it gives patients an opportunity to dramatically reverse the effects of facial aging by stimulating the body's own rejuvenation process instead of using fillers, toxins or surgery," says Dr. Stong of Kalos Facial Plastic Surgery, LLC.

Profound RF Microneedling is safe and effective for all skin types, including ethnic skin. Patients may choose to undergo Profound Microneedling as a standalone service or as a compliment to another surgical or non-surgical treatment at Kalos Facial Plastic Surgery, LLC. Dr. Stong is a leading facial plastic surgeon who is known for his pioneered techniques in cosmetic procedures, which include minimally-invasive procedures that produce sustainable and natural-looking results for a more rested and youthful appearance.
